Intel® Atom™

Intel's 30-year-old embedded computing division focuses on purpose optimized application devices that require long life cycle and both computing and Internet capabilities in a mobile and durable environment, but are not traditional PCs.

pcKeyboard® - Innovation to improve Retail Transaction segments

Customer service counter space is at a premium where a salesperson, agent, or teller performs transactions with a customer.

By embedding the Intel Atom processor inside the proven Cherry SPOS Keyboard the "PC box" is eliminated. Reduced cables and components means a more efficient and neater fixture.

Retail, healthcare, rental car, airline check in, and retail banking can streamline the customer transaction work space.
