# THE BIRTH OF THE INTELLIGENT CASH DRAWER

The pcCashdrawer™ is the beginning of a new age in POS hardware solutions – the Intelligent Cash Drawer. Gone is the computer taking up space behind the checkout counter and the ugly cables associated with the pieces and parts approach to POS.

The pcCashdrawer™ begins with the industry-leading MMF Media Plus cash drawer and mounts a military grade pc inside. Built for reliability, the pcCashdrawer has no power supply or fan to fail, its processor is one of the new, ultra low voltage, low heat chips and the laptop hard drive, selected for its ability to handle g-forces, is installed in a custom-designed shock mount. Additionally, the pcCashdrawer can be set up to boot off a flash memory card allowing the pc to operate with NO MOVING PARTS.

The level of stress for your IT department as well as your annual maintenance costs will also be reduced by installing the pcCashdrawer. If during the one year warranty the system should fail, pcCashdrawer, will pull a unit off the shelf, load the store's software and ship it to the site. There store personnel remove the failed unit by loosening the two thumb screws that hold the pc, slide in the replacement and re-tighten the thumb screws.

**"I am extremely excited to be able to offer the pcCashdrawer units to my customers. I believe that this unit will help solve many of the problems that have plagued POS systems for years. By eliminating the internal power supply and many of the moving parts the pcCashdrawer has drastically reduced the potential for hardware failure and the comprehensive, overnight replacement maintenance ensures a real 24 hour resolution should there be any hardware issues. Overall, the pcCashdrawer is an incredible product and a great value."**

**Jason Schwesinger, Director Reseller Business Unit-ISS, JDA Software**

With no need to use tools the system is up and running in minutes instead of hours.

Normally a costly add-on to the base warranty, the ability to preload the store's software is one of the most innovative aspects to pcCashdrawer's warranty. By allowing AVE Investments to store a copy of your retailer's software on a "gold" drive at their service facility, pcCashdrawer is able to ship a store its replacement unit without the need for your IT department to first load the software onto the system before shipping it to the store site.

Lastly, because the pcCashdrawer™ uses an industrial motherboard, the life cycle of the product is typically 5-7 years rather than a few months as is the norm for consumer-grade motherboards. This means that the drivers that were used to create the original "gold" drive for all the stores will remain constant over a longer period of time; again saving money and effort. **PTW**
