

# iRegister™

by pcCashdrawer®

The iRegister revolutionizes consumer retail transaction technology and value. No longer will retailers need to purchase all in one POS systems for checkout and hand held terminals for mobile applications. The \$999 iRegister has set the bar for combined price and performance.

The iRegister is stationary when docked to a cash drawer base station for checkout, or mobile by removing the tablet from its dock and using battery power for line busting, inventory management, order taking, or sales floor customer service applications. Portable scanners and credit card readers are provided for the tablets.

Using the Intel Atom processor and Windows 7 pcCashdrawer's touch tablet will run a wide variety of POS and Managers Workstation applications.
